mLT30 mini laptop cart

With the emergence of mini-laptop technology in modern educational environments, Spectrum Industries has created the perfect solution to secure and charge netbooks. A built-in handle and 5" casters make the Mini-LT extremely mobile for ease of transport. Padded tray bottoms and plastic divider sleeves protect the mini-laptops from damage. Special attention is given to cord management, with easy access to electrical power in each bay. Optional cord trays offer further support in back of the unit. Doors and panels are effectively ventilated for circulating "chimney effect" airflow to keep netbooks cool. As with all Spectrum products, solid construction is designed into the Mini-LT with steel doors and panels. The electrical system is comprised of UL-certified components. Available options include a rear door with 2-point lock for extra security. Samples for each outside rep are on order for delivery in June 09

Features and Benefits/Selling information

- The new mLT30 laptop cart is designed to store and recharge up to 30 mini Laptops. Minis can be generally described as a laptop computer with a 10" or less display screen and sells for less than \$500.
- Electrical Power: The cart has two 16 outlet power strips with each containing a 15 amp breaker and on/off switch. Outlets are accessible from the back of the cart via a removable panel held with 6 phillips screws or easily removable thumbscrews. There is an optional rear 2-point locking door available also.
- Cord Management is accomplished one of two ways: In the vertical internal panel there are slots to attach velcro and the power cords/converter blocks. They are shown in the last photo at right. The second way is to order the optional tray that attaches to the vertical panel and the cords can lay in one of three trays. The power cord to the mini is attached at the front in the best position, depending on where it plugs into the mini notebook. Two outside cord wraps are standard. These cords are for separate room outlets to prevent overload.
- This product is priced to compete directly in the mid-range laptop market. Bretford holds most of this share and we lose sales based on price as we only carry full featured storage carts.
- The mLT30 Mini laptop cart has two caster options (balloon wheels BW and 3" caster HD, HD caster is less cost, balloon is better rolling and cushion) and two color options (CHB & IB).
- Overall dimensions: 39" H x 24" D x 27" W (w/handle)
- Slot size (2 minis per slot): 12.5" D x 4" W x 10" H
- mLT30 Product # 55315BW Price \$1598 List, \$799 Direct
- mLT30 Product # 55315HD Price \$1498 List \$749 Direct
- Optional Wire Management Trays (3) Product # 55316B List \$118 Direct \$59
- Optional Rear Door Product # 55317B Price \$258 List \$129 Direct

NOTE: Vent pattern in the sides will be slightly different in the production units.
